WHAT IS THE PURPOSE OF THIS UPDATE?

This document tells you how the Mercer Moderate fund has performed and what fees were charged. The document will help you to compare the fund with other funds. Mercer (N.Z.) Limited prepared this update in accordance with the Financial Markets Conduct Act 2013.

This information is not audited and may be updated.

DESCRIPTION OF THIS FUND

The Mercer Moderate fund invests in cash and fixed interest, with about a third of investments being in growth assets such as shares and real assets. This fund may be suitable for investors who want to reduce the risk of a negative return by investing in a broader mix of assets and who are willing to accept slightly more volatile returns in the shorter term in exchange for improved longer-term returns.

The date the fund started	9 October 2015

WHAT ARE THE RISKS OF INVESTING?

Risk indicator for the Mercer Moderate fund[†]:

The risk indicator is rated from 1 (low) to 7 (high). The rating reflects how much the value of the fund's assets goes up and down. A higher risk generally means higher potential returns over time, but more ups and downs along the way.

To help you clarify your own attitude to risk, you can seek financial advice or work out your risk profile at www.sorted.org.nz/tools/investor-kickstarter.

Note that even the lowest category does not mean a risk-free investment, and there are other risks that are not captured by this rating.

This risk indicator is not a guarantee of a fund's future performance. The risk indicator is based on the returns data for 5 years to 31 December 2016. While risk indicators are usually relatively stable, they do shift from time to time. The risk indicator will continue to be updated in future fund updates.

See the Product Disclosure Statement (PDS) for more information about the risks associated with investing in this fund.

[†] A combination of actual fund returns and market index returns have been used to determine the risk indicator as the fund commenced operation on 9 October 2015. The risk indicator may therefore provide a less reliable indicator of the potential future volatility of the fund. For the five year period ending 31 December 2016, market index returns have been used up to 31 December 2015 with actual fund returns used for the balance of the period to 31 December 2016.
